

Chemistry 448/548
Fall 2003

This form is to offer you the opportunity to provide comments and suggestions on this class. In particular, I'm looking for suggestions to improve this class. Feel free to comment on all aspects of the course: my notes, the book, the lecture, etc. The more specific you can be in your observations, the more likely they will be acted on. If you've seen examples in other classes that you think would work here, mention them. This is posted on the web so that you can begin making your comments as you go. You should turn this in on evaluation day. I will not see it until after turning in final grades.
